

**W.J. KEATING LIMITED**

## **TOTALLY ENCLOSED PLAIN BEARING SWIVEL**

DESIGNED TO WITHSTAND SEVERE WORKING CONDITIONS  
WEATHER-PROOF, DUST PROOF AND HARD WEARING

**K-1234**

DUAL SOLID SWIVEL

PATENT No. 516502

### ADVANTAGES OF THE PATENT SOLID SWIVEL

**CONSTRUCTION.** The Swivel consists of three separate parts, each made from the solid material, with the centre as the body. Each Eyebolt end has independent swivelling movement.

**SAFETY FACTOR.** In strength it surpasses any Swivel ever produced and the rotating movement is unimpaired right up to the point of destruction.

**SWIVELLING ACTION.** The Swivel has the perfect free and smooth movement of a Ball Bearing type.

**LUBRICATION.** This is not essential, but occasional application of oil or grease ensures a capacity for very long and continuous use. For this purpose the barrel is fitted with an oil hole.

**ECONOMY.** Although having ALL the advantages of the most expensive Ball Bearing type, and NONE of the disadvantages, the DUAL (PATENT) SOLID SWIVEL is CHEAPER than a Ball Bearing Swivel.
