HAND MADE BOAT FENDERS

We are offering a quality nautical accessory which gives the best protection for your boat; MANILA ROPE, BOAT FENDERS.

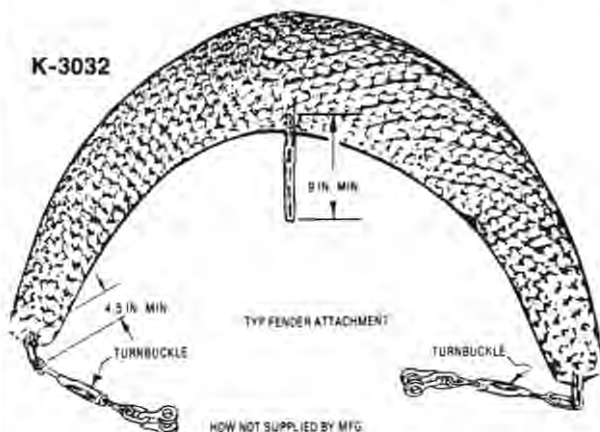

The outside is made of soft Manila, the inside either of Manila or Polypropylene. Polypropylene is used mostly in the larger size fenders to keep weight at a minimum. They are of sturdy construction, unique and long lasting and a must for the discriminating boat man.

A fresh and salt water test shows the fenders will float up to twelve hours and absorb 50% of their own weight in water. As our fenders are hand made, sizes and weight may vary.

Both side and bow fenders are available in five standard sizes or fenders can be made to your specification.

BOW FENDERS

K-3032

Bow fenders under 40" in length have one steel wire loop on the right and left side. 40" and larger are as shown (Turnbuckle and shackle not included).

Bowfenders with beard as shown available
