Lineman's Snatch Block, 5022

This galvanized block is used for stringing light conductor wire. The hook fits around the insulator pin or in the insulator hole and can be readily driven into a pole or cross arm. It is available with or without the hook, with either bronze, self-lubricating bushings or ball bearing bushings with pressure grease lubrication. Locking spring optional.

Description	Stock Numbers		Weight in Pounds
	Bronze Bushed	Roller Bushed	
With hook	938-0602	938-0601	2½
Without hook	938-0603	938-0604	2¼

5022

Light Wire Blocks, 5023

These galvanized blocks are used to take the slack out of light wire. The assembly locks when the fall line is pulled to one side and releases when pulled to a straight position. Used with ¾" diameter rope (not furnished). Roller bushed sheaves are easily replaced.

Stock Number	Assembly Weight in Pounds
938-0701	2¼

5023

Aerial Hand Line, 5041

The aerial hand line is used to transport tools and equipment to a man aloft. It consists of one roller-bushed, galvanized metal block; two snap hooks; one ring; two thimbles and one missing link. All metal parts are galvanized. The block can be reeved with 60' or 75' of either ¾" or ½" manila rope.

Description	Stock Numbers	Weight in Pounds
Block with hook only	938-0901	2
Block and hardware	938-0902	2½
Complete, with 60' x ¾" rope	938-0903	3¼
Complete, with 75' x ¾" rope	938-0904	3½
Complete, with 60' x ½" rope	938-0905	3¾
