

24" high lift blocks

HEAVYWEIGHT CRANE BLOCKS

24" diameter sheaves for 1 1/8" wire rope—35-300 ton working loads.

Models with 1 through 8 sheaves.

- Extra thick, solid, extended side plates for maximum overhaul weight—no additional cheek plates to bolt on.
- Tapered roller bearings on sheaves; lip seals retain grease and prevent contamination. Sheaves individually lubricated.
- Extra high strength construction; forged alloy steel hooks; alloy steel shafts and pins; forged steel trunnion; and heavy duty welded connections.
- Available with choice of single or double hook.
- Plus the outstanding construction details shown below.
- Choice of low profile side plates (TF Series) or extended side plates (T Series).
- Also available with 30", 32" and 36" sheaves. (See pages 44 & 45)
