

W.J. KEATING LIMITED

CRANE BLOCKS WITH THRUST BEARING HOOKS FOR MOBILE AND BRIDGE CRANES

5 TO 300 TON CAPACITIES

1. Large diameter alloy steel heat treated and ground center pins provide longer bearing life and low starting torque.
2. Heavy duty cast steel sheaves with machined wire rope grooves. Furnished with bronze or roller bearings and individual sheave lubrication permits adequate grease penetration.
3. Detachable cast iron cheek plates for additional weight. Optional "H" models. Designed for shortest possible overall length for more head room.
4. Moveable swivel hook provides easy engagement of hook by swinging backward or forward.
5. Enclosed sheave guard makes for easier threading—eliminates possibility of wire jumping sheave.
6. Forged Steel Hook with heavy duty thrust bearing for 360° rotation.
7. Heavy steel plate welded construction provides rigidity and strength for longer life.
8. Bronze Spacers between sheaves eliminate galling.
9. Standard hook latch with all blocks.
10. Double hook available.
