

30" and 36" lift blocks

HEAVYWEIGHT CRANE BLOCKS

30" or 36" diameter sheaves for up to 1 1/4" wire rope—30-300 ton working loads.

Models with 1 through 6 sheaves.

- Extra thick, solid, extended side plates for maximum overhaul weight—no additional cheek plates to bolt on.
- Tapered roller bearings on sheaves. Lip seals retain grease and prevent contamination. Sheaves individually lubricated.
- Extra high strength construction: forged alloy steel hooks; alloy steel shafts and pins; steel trunnions, and heavy duty welded connections.
- Available with choice of single or double hook.

All dimensions approximate and subject to minor changes without notice.
